

AI/ML Research Papers Exploratory Data Analysis (EDA)

```
In [2]: import pandas as pd
import matplotlib.pyplot as plt
import numpy as np
import seaborn as sns
```

Introduction

This project performs Exploratory Data Analysis (EDA) on an AI/ML research papers dataset.

The dataset contains information about paper titles, authors, categories, publication years, abstracts, DOI references, and collaborations.

The purpose of this analysis is to identify trends, patterns, and relationships in AI and Machine Learning research publications using statistical analysis and data visualization techniques.

```
In [3]: df = pd.read_csv("/content/arxiv_ai_ml_papers.csv")
```

Dataset Overview

The dataset contains AI and Machine Learning research papers collected from arXiv.

It includes information such as paper titles, authors, categories, publication dates, abstracts, DOI references, and collaboration details.

This dataset helps analyze research trends, publication growth, author contributions, and relationships between different research features using Exploratory Data Analysis (EDA).

What are the first five rows of the dataset?

```
In [4]: df.head()
```

sns.heatmap(df.corr(numeric_only=True), annot=True)

plt.title("Correlation Heatmap")

plt.show()
```

Final Conclusion

This project performed Exploratory Data Analysis (EDA) on an AI/ML research papers dataset.

The analysis identified trends in research categories, authors, publication years, abstract lengths, and collaborations. It was observed that AI/ML research publications increased over time, showing growing interest in artificial intelligence and machine learning fields.

The project also explored relationships between authors, word counts, and abstract lengths using different visualization techniques.
